It's similar to iTunes and other similar music players in that it allows you to organize your music collection, download new music for free, preview tracks and even play them back on the service. Google Music is more than just an online music player, however. After your music has been uploaded to Google's servers, the company can give you access to a variety of neat features, such as the ability to listen to or download the music you own, or to search for new music that matches your tastes and listen to it in your own personalized way. The service provides more than just the music you own on your computer, however. In addition to providing access to your entire collection, the Google Music software allows you to search for songs that you know you enjoy, and preview them on your computer before deciding to download them. If your music is more than just one type, say, songs by one artist or a playlist, it can be easily added to your playlists, so you can keep them organized in a way that matches your own preferences. Organize your music by genre, artist, or anything else The Google Music software offers you the opportunity to organize your music by any number of genres, artists, or any other category.
