into the "Grinning Face" and "Smiling Face With Sunglasses" emoji. The extension also provides you with the possibility of searching for emoji by typing ":" followed by the actual emotion you're trying to convey. Basically, once the search query is entered, you can choose the best suitable result (emoji) from a floating dropdown list. If you have used similar solutions in the past, you will appreciate the fact that this is a very speedy tool with practically no pauses or hiccups. Saturday, November 3, 2017 Shenzhen is a city in China located on the southeastern coast of the Pearl River delta. It is one of China's four major special economic zones and a major global center of electronics and hi-tech manufacturing. With the rapid economic growth, the city's economy is also one of the biggest in China. Shenzhen is also known for its widespread unemployment and poverty, which has led to residents from different areas migrating to the city in search of jobs. This has made Shenzhen one of the fastest growing cities in the world, with almost 16 million people. Therefore, it is no wonder why Shenzhen has turned out to be a major tourist destination. In this post, we'll be looking at some of the best tourist attractions in Shenzhen. #1 Chek Lap Kok Airport In addition to being one of the fastest growing cities, Shenzhen is also growing in infrastructure. The airport is one of those major infrastructure projects, and it should be done by the year 2030. More so, Shenzhen is also known for its airport in the making, which has made the airport its most prominent and exciting tourist attraction. While some people still wonder why such an airport would be built in a

skipping a beat. Sometimes, you just wish you could drag and drop a file or a website link from your PC to your iPhone, iPad, Android or Mac. You're not alone. This is one of the main reasons why many people choose to use apps. They don't have to worry about copy and paste files or share links. The good news is that thanks to great apps like Simple Clipboard, this isn't a big hassle at all. It allows you to easily move files and links to your devices via the iPhone, iPad, Android or Mac. As its name suggests, this application is extremely easy to use. You just need to enter the URL of the file or website you want to share or drop it on the app's icon. Then you can either drag it or drop it on your desired device. Aside from letting you copy and

Send emojis to Twitter and Facebook. Keyboard macros are very useful tools that can help you make your day-to-day work easier and save you a lot of time. Using a keyboard macro is very simple, all you have to do is write a few words and press a few buttons (or rather, just press some keys on your keyboard). What's more, Macros can be used in any application that allows macros, and they'll work regardless of the application's developer. So let's say you're making an automatic speech recording application (that is, an app that allows users to record themselves talking into the microphone), and you want to allow them to type in the name of the person they're recording into the 'To' field of the tweet automatically, without the need to write it by hand. You could set a keyboard macro in your app that will automatically populate the 'To' field, by typing in the name of the person, with the name of the person automatically being appended to the tweet. Why would you want to do that? Because then you wouldn't have to manually write the name of the person you're talking into the field every time you want to send a tweet. You could just go to your Macros, create a new macro and, voilà! Done. Let's take another example: Say you're an application developer, and you want to allow your users to automatically talk in your application, one of the features that you want to add in your app is the ability to automatically create a list of tweets for the person you're talking into the app. You

---

can set a keyboard macro in your application that will automatically place the name of the person you're talking into the tweet into the 'To' field, the name of the person automatically being appended to the tweet. The ability to automatically add a keyword to the 'To' field is a keyboard macro feature that is rarely implemented in apps, or at least, if it is, it's only implemented by very big and famous app developers. Why should you be the only one? It allows you to save yourself a lot of time, because you don't need to type in the keyword manually in the app's 'To' field every time you want to send a tweet, and you can write your application so that it automatically adds the keyword to the 'To' field. So, why would you need to do that? Because it helps you speed up your workflow a lot, and saves

#### **What's New In Smiley Caret: Text To Emoji For Chrome?**

Smiley Caret: Text to Emoji for Chrome is the most comprehensive emoji tool. It allows you to type any text, and it converts it into a wide selection of emojis.
