Navigate to the following folder: %AppData%\Autodesk\AutoCAD\2018\\Models\Reference\ Here, for example: %AppData%\Autodesk\AutoCAD\2018\14.0\Models\Reference\ If you have a folder for other releases, check them as well. Paste the key file there and restart Autodesk AutoCAD. If you just want to use the key to unlock or activate the mod, don't bother with the step above. That's it. The mod will be unlocked. Previous version's guide The following video guide was made by David Cybulski. For the first person to upload a video I will probably give him an ingame mod creator reward of 3000 credits. How to update the mod This is a simple guide. Using a standalone updater Edit the file %Autodesk_AutoCAD_Mod_2019.ini and increase its size to 2300KB. Save the file with the.cab extension and name it Autocad_2019.cab. Drag the cab file into Autocad. Press ctrl+F9 to update the software. Using a standalone updater with multiple mods There are currently two standalone updaters: the first one named Automatic, and the other one named Admin. Autodesk could easily come up with a Windows API or some sort of OLE automation in order to extract all of the mods and create the new installer. Then they would upload a fixed file or a fixed version of the cab file, and the Mod version would update its self when it detects a change in the cab file. Autodesk AutoCAD Mod for 2019 has the largest file size to date at 11,546,091 bytes. The standalone updater updates all of the mods installed in it, but does not install them unless the installer is newer than the cab file. There are only two files that need to be updated in the Mod version: Autocad_Mod.ini and Autocad_Mod_2019.ini. Known issues
