Q: How to move all files with size larger than 500mb to a new folder? I would like to move all the files in the current directory with size more than 500mb to a new directory. I tried this command. `rename -n's/^([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+)$/s/1/moved/2/3/4/5/6/7/8/9/g' *.{mp3,ogg,flac}` But it didn't work. The problem is that, in the directory, there are many files, and in the file, the size of the file is more than 500mb. A: I think I got it: `mkdir new_dir rename -n's/^([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+).([0-9]\+)$/s/1/new_dir/2/3/4/5/6/7/8/9/g' *.{mp3,ogg,flac}` `mv -n new_dir *.{mp3,ogg,flac}` In this way, it is possible to move all the files to new_dir directory by changing directory. I've been using the Windows 95 operating system since 1997, and have been an ardent user of the program since the Windows 98 era. I'm not going to lie, I've gotten a bit bored of the programs being made available to the community, and the advances in operating systems. As such, I'm a bit more drawn to the indie developers. While the third-party software might not be as polished as a product made by Microsoft, there are some that are incredibly useful.
