## **Features Key:**

Ethereum lightning fast Dapp execution  
Non-Fungible game assets interoperability  
Bitcoin core implementation

## **What's a Dapp?**

The a16z co and D'Chain exchange have experimented with Dapps to create experiences in blockchain. In a Dapp the Ethereum blockchain can be used as a decentralized base layer to extend and interact with a web3 JSON API.

Dapp can be implemented in any scripting language to an extent. However, the most robust languages are the JavaScript type. The most popular Ethereum Dapp languages are Solidity and JavaScript. Next step in the platform's development is to set a standard for all the Dapp-to-be languages.

## **Developer Experience**

They are currently in the process of building a platform that can integrate the best of blockchain and the web to the benefit of both. Developers can build Dapps, ICO solutions, and game assets to interact with websites using technologies that are currently in use.

## **Cross-chain trading**

Numerous applications can be implemented on the blockchain platform. This includes currencies, ticketing services, wills, company stocks, casino games, and real estate. The future applications of the code are virtually unlimited.

BTCL offers the unique advantage of being the only completely decentralized exchange. It allows trading on an Ethereum like user interface directly to a bitcoin core and bitcoin lightning

## **Non-fungible asset gaming**
